DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to a method for processing requests including a data string that corresponds to a language code from a computer network, classified in class 704, subclass 8.
 - II. Claims 5-30, drawn to a method for processing request from a computer network comprising identifying a template and searching a registration table, classified in class 709, subclass 225.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I is a method for processing requests including a data string and a language code and invention II is a method for processing request comprising identifying a template and searching a registration table. The subcombination has separate utility such as processing web page in multiple languages and processing web page by identifying a template and searching a registration table..

Art Unit: 2654

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
